Profile

Software Developer with advanced skills in HTML, CSS, JavaScript, as well as solid experience in React.js along with technologies such as TypeScript, Redux, React-testing-library and third-party packages. I have contributed to the success of projects by increasing the functionality and performance of the applications, implementing new features, code migrations from JavaScript to TypeScript, unit testing, among other functions, thus improving maintainability and reducing bugs. I thrive in team environments and enjoy challenging myself to collaboratively achieve the best results.

Technical Skills

- HTML, CSS, JavaScript
- React.js
- Node.js
- Redux
- TypeScript
- Git / GitHub
- Tailwind CSS
- SQL
- Agile Methodologies

Work Experience

ReactJS Software Engineer

TEAM International | 07/2023 – Present

- Contribute to the application enhancement by implementing new features using React, Redux, React-Testing-Library, TypeScript, among others, to improve the functionality and performance of the application.
- Efficiently resolve several bugs, improving software stability and customer satisfaction.
- Implementation of unit tests using react-testing-library to cover new and existing code increasing overall code coverage.
- Migration from JavaScript files to TypeScript files to improve maintainability and early bug detection.
- Collaborate with cross-functional teams in an agile Scrum environment, contributing to the efficient development and delivery of high-quality product features.

Projects

AgroMAS – Web Application| Frontend Developer

- Collaborate with the UX team to create interactive prototypes, reducing development time by 20% and improving user engagement.
- Build a fully functional React application with Next.js, Tailwind CSS, Prisma and PostgreSQL, which allows a connection between farmers and consumers.
- Implementing a responsive interface design that ensures cross-device compatibility to generate greater user accessibility.
